

An old favorite takes a huge step forward

Introducing the Kirby® Fridgebox™ Series IV with microchannel coil

Just like the evolution of bacon and eggs to eggs benedict, so too has the Kirby Fridgebox evolved. The new generation Kirby Fridgebox Series IV Outdoor Condensing Unit now includes Hypercore™ microchannel coil technology in place of the traditional fin and tube.

The microchannel all aluminium coil delivers high performance and is extremely durable and lightweight. It will lower the amount of refrigerant in the system by up to 50%, compared to a conventional aluminium fin and copper tube design.

The Kirby Series IV Outdoor Condensing unit is designed with a compact footprint, is easy to service and arrives on site pre-wired to assist with installation. The Kirby Fridgebox Series IV Outdoor Condensing Unit is suitable for food & beverage businesses, convenience stores and liquor stores.

The trusted Kirby Fridgebox - It's your bacon and eggs of outdoor condensing units
